PROFESSIONAL SUMMARY

Network operations engineer with enterprise NOC experience monitoring an environment of 50,000+ servers and services using SolarWinds, Dynatrace, Splunk, ThousandEyes, and ServiceNow. Correlates network and application telemetry to assess service impact, investigate faults, and support incident handoffs in 24/7 operations. Builds hands-on observability and automation projects with Prometheus, Grafana, Ansible, Linux, and Proxmox. Brings executive reporting experience at Microsoft and an MS in Business Intelligence to connect technical findings with operational and business decisions.

WORK EXPERIENCE

Network Operations Center Engineer

Humana | Contract | April 2024 - Present

- Contributed to the team recovery of hundreds of virtual machines during the CrowdStrike outage, remotely removing the problematic update file to help restore affected systems.
- Monitor network, server, and application health across an enterprise environment supporting 50,000+ servers and services.
- Triage alerts and outage tickets using SolarWinds, Dynatrace, Splunk, ThousandEyes, and ServiceNow to establish scope, severity, and service impact.
- Correlate network and application telemetry to isolate connectivity, routing, firewall, storage, virtualization, and service faults.
- Monitor Cisco Meraki devices through the Meraki dashboard; use Linux, VMware vSphere, JBoss, NetScaler, and CyberArk in daily operations.
- Support DNS and firewall changes with documented request context, implementation risks, and escalation details.
- Document incident timelines, troubleshooting findings, and resolver-group handoffs in a 24/7 operations environment.

Global Inside Partner Development Manager

Microsoft | Remote | January 2022 - December 2023

- Managed reporting for SaaS/PaaS pipelines exceeding \$700M annually, translating partner and sales data into executive reporting.
- Worked with cross-functional stakeholders to communicate pipeline health, opportunity progression, and forecast risk.
- Supported global alliances with SAP, Bentley, and ESRI across cloud, SaaS, and PaaS partner initiatives.

PROJECT EXPERIENCE

Proxmox Infrastructure, Automation and Observability

Personal Lab

- Use Prometheus and Grafana monitoring to investigate service faults, validate recovery, and present actionable operational status.
- Built a Raspberry Pi Ansible control surface for repeatable fleet maintenance and service and storage health checks.
- Administer Proxmox VMs and LXC's, Debian services, and Docker applications with Pi-hole DNS, Tailscale remote access, and Nginx reverse proxying.
- Troubleshoot service dependencies, storage capacity, DNS, and access issues; maintain backups and recovery documentation for repeatable maintenance.

NetOps Command Center

Independent Development Project

- Built a self-hosted dashboard using FastAPI, React/Vite, and SQLite for infrastructure inventory, health checks, diagnostics, and incident tracking.
- Developing workflows for configuration snapshots, alerting, and controlled remediation across Linux, Docker, and Proxmox workloads.

EDUCATION

Master of Science in Business Intelligence

Full Sail University | September 2026

Bachelor of Science in Cybersecurity

Full Sail University | March 2025

Associate of Science in Information Technology

Full Sail University | December 2023

SKILLS

Enterprise Monitoring / NOC: SolarWinds, Dynatrace, Splunk, ThousandEyes, ServiceNow, Cisco Meraki, incident triage, telemetry correlation, escalation and handoffs

Lab Observability: Prometheus, Grafana, service health checks, fault investigation and recovery validation

Networking: TCP/IP, DNS, DHCP, VPNs, SSL/TLS, IPsec

Infrastructure: Linux/Debian, Windows Server, Proxmox, VMware vSphere/ESXi, Docker, JBoss, NetScaler, CyberArk

Automation: Python, PowerShell, Bash, Ansible, GitHub, API workflows

Security (academic/lab): Nessus, Nmap, Wireshark, Burp Suite, OpenSSL; OWASP, MITRE ATT&CK concepts

Analytics: Power BI, DAX, Excel, KPI reporting, dashboards, trend analysis, dimensional modeling
