PROFESSIONAL SUMMARY

Network operations engineer with enterprise NOC experience supporting an environment of 50,000+ servers and services. Combines incident triage, DNS and firewall change support, and cross-layer troubleshooting with independent infrastructure and automation projects. Holds an MS in Business Intelligence and a BS in Cybersecurity, connecting technical operations with reporting and business decision support.

WORK EXPERIENCE

Network Operations Center Engineer Current role
Humana | Louisville, KY

- Monitor network, server, and application health across an enterprise environment supporting 50,000+ servers and services. - Triage alerts and outage tickets using SolarWinds, Dynatrace, and ServiceNow to establish scope, severity, and service impact. - Support DNS and firewall changes with documented request context, implementation risks, and escalation details. - Correlate network and application telemetry to isolate connectivity, routing, firewall, storage, virtualization, and service faults. - Document incident timelines, troubleshooting findings, and resolver-group handoffs in a 24/7 operations environment.

Global Inside Partner Development Manager January 2022 - December 2023
Microsoft | Remote

- Supported global alliances with SAP, Bentley, and ESRI across cloud, SaaS, and PaaS partner initiatives. - Managed reporting for SaaS/PaaS pipelines exceeding \$700M annually, translating partner and sales data into executive reporting. - Worked with cross-functional stakeholders to communicate pipeline health, opportunity progression, and forecast risk.

Bratsu SecureOps
Independent Development Project

- Developing an AI-assisted managed IT and cybersecurity platform for small-business asset visibility, findings, guided remediation, and auditable workflows. - Implemented and validated owner authentication in a Docker/Linux deployment, with secure configuration and maintainable operational workflows.

Proxmox Infrastructure, Automation and Observability
Personal Lab

- Administer Proxmox VMs and LXC's, Debian services, and Docker applications with Pi-hole DNS, Tailscale remote access, and Nginx reverse proxying. - Troubleshoot service dependencies, storage capacity, DNS, and access issues; maintain backups and recovery documentation for repeatable maintenance. - Built a Raspberry Pi Ansible control surface for repeatable fleet maintenance and service and storage health checks. - Use Prometheus and Grafana monitoring to investigate service faults, validate recovery, and present actionable operational status.

EDUCATION

Master of Science in Business Intelligence
Full Sail University

Bachelor of Science in Cybersecurity
Full Sail University

Associate of Science in Information Technology
Full Sail University

SKILLS

Networking / NOC: TCP/IP, DNS, DHCP, VPNs, SSL/TLS, IPsec, SolarWinds, Dynatrace, ServiceNow

Infrastructure: Linux/Debian, Windows Server, Proxmox, VMware/ESXi, Docker, Nginx, Tailscale

Automation / Monitoring: Python, PowerShell, Bash, Ansible, GitHub, API workflows, Prometheus, Grafana

Security (academic/lab): Nessus, Nmap, Wireshark, Burp Suite, OpenSSL; OWASP, MITRE ATT&CK concepts

Analytics: Power BI, advanced Excel, KPI reporting, dashboards, trend analysis, dimensional modeling
